

An isometric illustration of a man with a beard, wearing a teal shirt and blue pants, sitting on a large, dark blue server rack. He is using a laptop. A coffee cup sits on the server rack next to him. The background is a dark blue gradient with various data visualization elements, including line graphs with percentage labels (32%, 44%, 67%, 51%, 74%, 58%), pie charts, and flowcharts. The overall aesthetic is modern and tech-oriented.

PTM COnccept of Meta universe

Meta universe

This white paper describes a new decentralized metacosmic ecosystem, including digital asset trading

Taiwan, p2e online finance, NFT sector, gamefi, etc. Let all game platforms - Mobile, computer

The console and VR / AR can implement the blockchain technology and remove the smart contract of trusted intermediaries

Sell game virtual props. The game prop transaction will use the encryption token "PTM".

Yuanuniverse is a new Internet application and social form that integrates virtual reality and a variety of new technologies,

It provides immersive experience based on extended reality technology and generates a mirror image of the real world based on digital twin technology,

Build an economic system based on blockchain technology and integrate the virtual world with the real world in the economic system and social system

System and identity are closely integrated, and each user is allowed to produce content and edit the world

PTMC Oncept of Meta Universe

Meta universe

In order to realize the huge meta universe ecology in the future, we need to establish the most comprehensive centralized game virtual prop trading platform to prepare for the circulation of meta universe assets. With the development of blockchain technology, our new decentralized ecosystem will provide ubiquitous circulation for game props and provide more value for the game market and participants. Here, the participants are mainly game developers, publishers and game players, as well as game props market, transaction promoters and other contributors. In this ecosystem, economic value is distributed among all participants to ensure that they receive their due returns.

The new decentralized ecosystem will bring great benefits to game players, game developers and publishers. Players have unprecedented flexibility and can purchase, sell and hand in game props directly point-to-point (P2P) with other game players, so that players can obtain great value from hard-earned game props. And the key is that they will trade in a zero fraud environment, which never existed before blockchain technology was available

Game developers and publishers will earn more revenue for the following reasons:

First, the new ecosystem encourages players to buy more game props, and the price is higher than now, because they know they can recover their investment by selling their game props freely and safely in a huge liquid market. Second, game publishers will enjoy a new source of revenue - as long as game players use smart contract blockchain transactions, game publishers will receive commissions.

Under our unique network growth model, game publishers that actively adopt PFW will get good returns. Summarizing the above views, the key point is that the benefits brought by the new system to game publishers can not be underestimated. Game publishers will play a key role in this ecosystem. Each game publisher must choose which encryption token to use. PTM is the only encryption token with built-in and specific ecosystem for game developers, and can bring rich returns to game developers. Therefore, we believe that PTM will be quickly adopted and will become the main encryption token in the metauniverse game industry.

PTM Meta Cosmic Ecology

PTM yuan universe asset trading platform

It is an important platform for the circulation of meta universe assets. It is the basis for all value exchange in the whole meta universe, which is equivalent to Amazon in the field of meta universe.

Online financial investment platform

It will provide financial services for high-quality projects in the whole meta universe ecology
Business. P2e finance is a new financial model. It will be safer than traditional P2P finance and can provide more efficient financing services.

PTM NFT Platform

It is the core asset of the whole meta universe ecology. Many valuable NFT assets will be born in the meta universe, which need to be traded and circulated.

Deflation smart contract

PTM coin holders will receive a 5% bonus

1. Global game market

Market

The global game market is huge. According to the latest research of newzoo, 2.2 billion players will create \$128.5 billion in game revenue in 2020. This figure represents an increase of \$5.8 billion over the previous year. And growth will continue, with revenue expected to reach \$135 billion in 2021. In the global game market, the proportion of digital game revenue in 2017 was about 87%, or US \$94.4 billion. The free game mode of the game has become the leading framework with the sales revenue of game props. For example, supercell, a manufacturer of mobile games such as conflict Royal and tribal conflict, generated sales of \$2.3 billion in 2016. Although gamers can play supercell games for free, they still buy \$2.3 billion of game props and compete with each other.

PTM economic model

BSC

PTM will establish new PTM tokens based on the currency security intelligent chain BSC, with a total of 1000 trillion. Building a new decentralized ecosystem based on this token will further help our vision of a completely transparent and frictionless infrastructure for game prop trading. The blockchain will provide the safest storage space for virtual assets, and the smart contract will create a transparent public account book.

PTM is a fixed supply encryption token. PTM supports subdivision, and its units are replaceable and transferable. PTM chose coin security intelligent chain because it valued its flexibility and wide application. As long as both sellers and buyers have a compatible wallet, game players can easily send game props and PTM to each other. Game publishers can integrate this function so that game players can easily and safely transfer game props out of the game. The blockchain will be used as a multi game database to safely store all the games

There are game props and PTM, and their owners can be tracked.

Through the new PTM token, our goal is to unlock the game props in each game and promote the transaction of the centralized ecosystem, so as to create asset liquidity and then change the industrial paradigm. With blockchain technology, such transactions are not only applicable to the perfect world platform, but also can be safely and reliably promoted in all markets. In other words, this will promote the progress of the whole game prop ecosystem.

PTM will make use of the coin security smart chain, which is the current industry standard for issuing customized digital assets and smart contracts. By confirming the ERC-20 token interface, PTM will be compatible with the existing Ethereum infrastructure, such as development tools, wallets and trading platforms. At the core of the coin security blockchain, the virtual machine allows the deployment and execution of smart contracts, so as to establish complex issuance rules of cryptocurrencies such as PTM and realize automatic reward structure. In short, it eliminates any trust issues and protects the parties to the transaction from fraud. These powerful functions and dynamic ecosystems make the coin security intelligent chain very suitable for PTM. We firmly believe that it will be quickly accepted by game publishers and game players.

For game publishers, we will provide all open source plugins and software development kits (SDKs) so that their games can identify the transfer between game props and game players' blockchain wallets. These can be items such as digital currency, weapons or armor in the game, different skins, additional content, special game versions, or even collectable badges. The blockchain network will track the ownership of all these game props.

Players can simply use the ready-made Ethereum wallet to save their PTM and game props and trade freely anywhere.

Players can use familiar functions to send PTM and game props, such as wechat wallet, paypal and venmo user transfer. All transaction records and ownership data will be securely retained on the block, and smart contracts will be adopted to prevent fraud.
